

Long-term Portfolio

Fund Fact Sheet: February 2020

DESCRIPTION

The long-term portfolio is an internal private equity portfolio available for funds held in Donor-advised Funds. Of the available choices this portfolio has the highest level of risk and the highest return potential. It also offers the opportunity for funds in the portfolio to have a positive influence on society through impact investing. It is suitable for donors who would like their donated funds to grow aggressively before being distributed to an approved charity, while accepting the limited liquidity and risks inherent in a private equity portfolio. Donors should aim to leave the funds invested for several years.

LIQUIDITY

The long-term portfolio does not offer guaranteed liquidity, but will aim to pay 2.5% of its net asset value into a donor's short-term portfolio each year (unless the donor elects that the money should be re-invested in the long-term portfolio). In addition, liquidity will be made available if there is a liquidity event (such as sale of an investment) in the portfolio. Donors who would like to withdraw money for distribution to approved charities can also be accommodated based on new inflows into the portfolio.

INVESTMENT STRATEGY AND MANDATE

The portfolio invests primarily in unlisted equities, but can also include listed equities if there is a compelling reason to do so. It will from time to time include a cash portion, while suitable investment opportunities are sought.

FUND DETAILS

Inception Date: 1 March 2016
